

2018  
BUILDING BENCHMARKING  
REPORT

# 1. Introduction

## *Background*

Executive Order Number 2 of 2018 commits Ulster County to decreasing greenhouse gas emissions associated with its operations (through conservation, efficiency, and on-site renewable generation) by 25% by 2025 and 80% by 2050 using the County's 2012 greenhouse gas emission inventory as a baseline. A baseline greenhouse gas (GHG) inventory conducted in 2012 for Ulster County government operations evaluated the energy use and emissions associated with the county vehicle fleet, employee commuting to and from the workplace, and the operations of county owned or occupied facilities. That inventory showed that the buildings & facilities sector alone accounted for 43% of all greenhouse gas emissions, totaling 5,804 metric tons of CO<sub>2</sub>e.<sup>1</sup> Ulster County's building portfolio consists of 42 properties with gross floor area totaling nearly 950,000 square feet.

Building energy use benchmarking is critical to the achievement of greenhouse gas emissions goals. First, it allows the comparison of weather-normalized energy metrics across time periods to assess the impact of building efficiency improvements. Second, it allows comparison to a national standard (EPA ENERGY STAR®) and average commercial building performance across the United States—helping to identify outlier properties within the Ulster County portfolio, communicate the opportunity for energy efficiency, and focus energy management attention. One of the main goals of this benchmarking report is to consistently track and monitor the energy use and emissions associated with the County's building inventory in order to better inform both operations and planning activities to improve efficiency and reduce costs as possible.

## *Reporting Requirements*

Resolution No. 447 of 2016 established a policy for annual public reporting of building energy consumption for Ulster County-owned or occupied buildings with a gross floor area equal to or greater than 1,000 square feet. This policy requires public reporting of the following building performance metrics no later than September 1<sup>st</sup> each year:

- Energy Use Intensity (EUI)
- Weather Normalized Source EUI
- Annual Greenhouse Gas emissions
- Energy performance score (when available)

## Methodology

Ulster County benchmarks building energy using the EPA's ENERGY STAR Portfolio Manager application, an online tool that tracks energy, water and waste consumption and calculates a variety of energy performance metrics as well as greenhouse gas emissions. The Portfolio Manager application also calculates weather normalized metrics, a way to remove the impacts of climate differences in year-to-year comparisons. Energy use and emissions data from 2012 has been used as a baseline value for benchmarking purposes, to show progress toward Ulster County's GHG reduction goals.

**Electric Vehicle (EV) Charging Stations:** Several Ulster County properties have EV charging stations installed on site and configured to draw energy from the building electrical panel. Without any adjustments, this energy would be included in the building energy use metrics and would indicate excess usage as the energy is used to power vehicles and not the building systems. However, using data from the ChargePoint® EV charging station reporting system, this electricity usage can be deducted from the building usage to report an accurate building use total. The portion of this electricity used for fleet vehicles is reported in the Ulster County Green Fleet report annually.

**Fixed Usage Area Lighting:** Ten Ulster County properties are billed monthly for utility-provided outdoor area lighting, which is reflected as "Flat Charge" usage on the utility invoice for the account and is billed by Central Hudson according to Service Classification Number 5 rates. This usage is included in the metrics for each property with lighting installed. The cost includes fees for the rental of the lighting equipment from Central Hudson. Where applicable, a property use-type of parking and parking area estimate are input in the Portfolio Manager system for improved accuracy in calculating energy use metrics.

**Factors and Conversions:** The EPA Portfolio Manager application converts all fuel types to a common energy unit—thousands of British thermal units (kBtu)—to allow for aggregation to calculate whole-building energy use. To do so, the Portfolio Manager application applies the thermal conversion factors contained in Table 1 below. This conversion allows the comparison of relative magnitudes of energy use across fuel types as shown in Chart 1 below.

Table 1: Conversion Factors<sup>2</sup>

Fuel Type	Input Unit	Conversion Factor
Electricity (Grid Purchase)	kWh	3.412 kBtu/kWh
Natural Gas	CCF	102.6 kBtu/CCF
Propane	Gallons	92 kBtu/gal
Fuel Oil (No. 2)	Gallons	138 kBtu/gal
Diesel	Gallons	138 kBtu/gal
Wood	Tons (US)	17,480 kBtu/ton

## 2. Building Energy Use

Ulster County uses the following energy sources for heating, cooling and powering its buildings. Usage and cost data is obtained from the vendor through web applications or data requests.

*Table 2: Energy Types and Data Sources - 2018*

Energy Type	Supplier and Data Source
Electricity	Delivery: Central Hudson (web access) NYSEG (web access & customer service) Supply: Direct Energy (web access)
Natural Gas	Delivery: Central Hudson (web access) Supply: Direct Energy (web access) Agera Energy (customer service request)
Fuel Oil	Heritagenergy, Inc./Kosco (web access) Bottini Fuel Oil (web access) Paraco Gas Corp (web access)
Propane	Heritagenergy, Inc. (web access) Bottini Fuel Oil (web access) Paraco Gas Corp (web access)
Diesel Fuel (for generators)	Heritagenergy, Inc. (web access) Bottini Fuel Oil (web access) Paraco Gas Corp (web access)

Currently, energy-use metrics for benchmarking are not calculated for properties where Ulster County leases office space in facilities without sub-metering. In these cases, energy use data for the leased spaces cannot be separated from whole building energy use. Table 3 contains a listing of these spaces as of December 31<sup>st</sup>, 2018.

*Table 3: Leased Space without Metered Energy Use Data - 2018*

Property	Address	UC Leased Space (sq. ft.)	Total Building Space (sq. ft.)
Board of Elections	284 Wall Street, Kingston, NY	3,566	27,137
Public Defender	280 Wall Street, Kingston, NY	4,050	27,137
Department of Health - W.I.C.	230 Aaron Court, Kingston, NY	2,917	9,000
Probation Department	124 Main Street, New Paltz, NY	1,308	4,920
Office of Employment and Training	521 Boice's Lane, Kingston, NY	10,287	98,464
Sheriff's Substation Walkkill	1500 Rt. 208, Walkkill, NY	711	3,840
Sheriff's Substation Mt. Tremper	146-152 Mt. Pleasant Rd, Mt. Tremper, NY	2,004	N/A
Sheriff's Substation Shandaken	Town Hall, Rt. 28	N/A	N/A
Sheriff's Substation Port Ewen	Esopus Town Hall, Salem St.	N/A	N/A

Two buildings were closed in 2018: The Flatbush Annex Complex was sold and the lease for the Family Court at Lucas Avenue was terminated. These properties are included in this report and are labeled as "Closed."

The following Charts 1 and 2 show the relative proportions of total energy and cost contributed by each of the energy types used in Ulster County buildings in 2018.

Chart 1: 2018 Total Building Energy Usage by Type (kBtu)

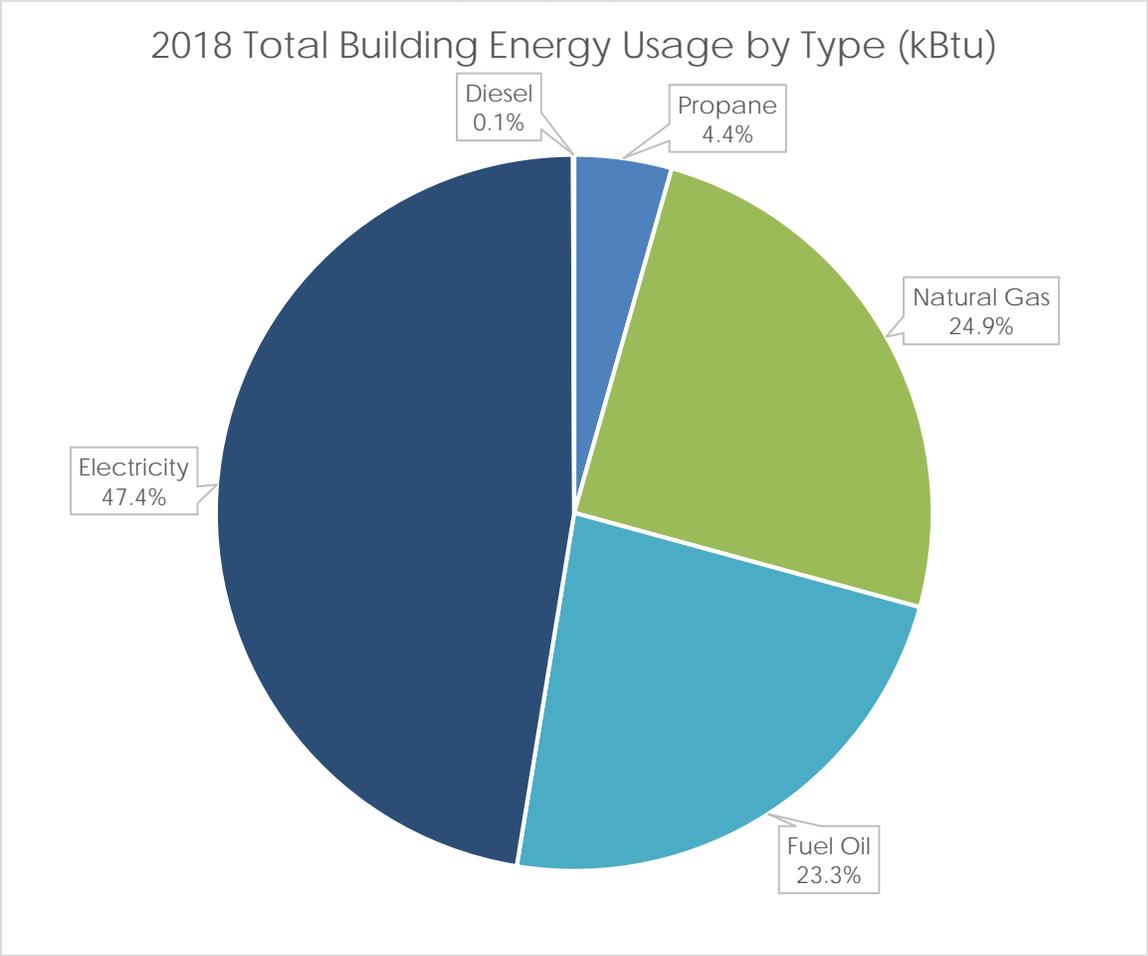

Chart 2: 2018 Total Building Energy Cost by Energy Type (\$)

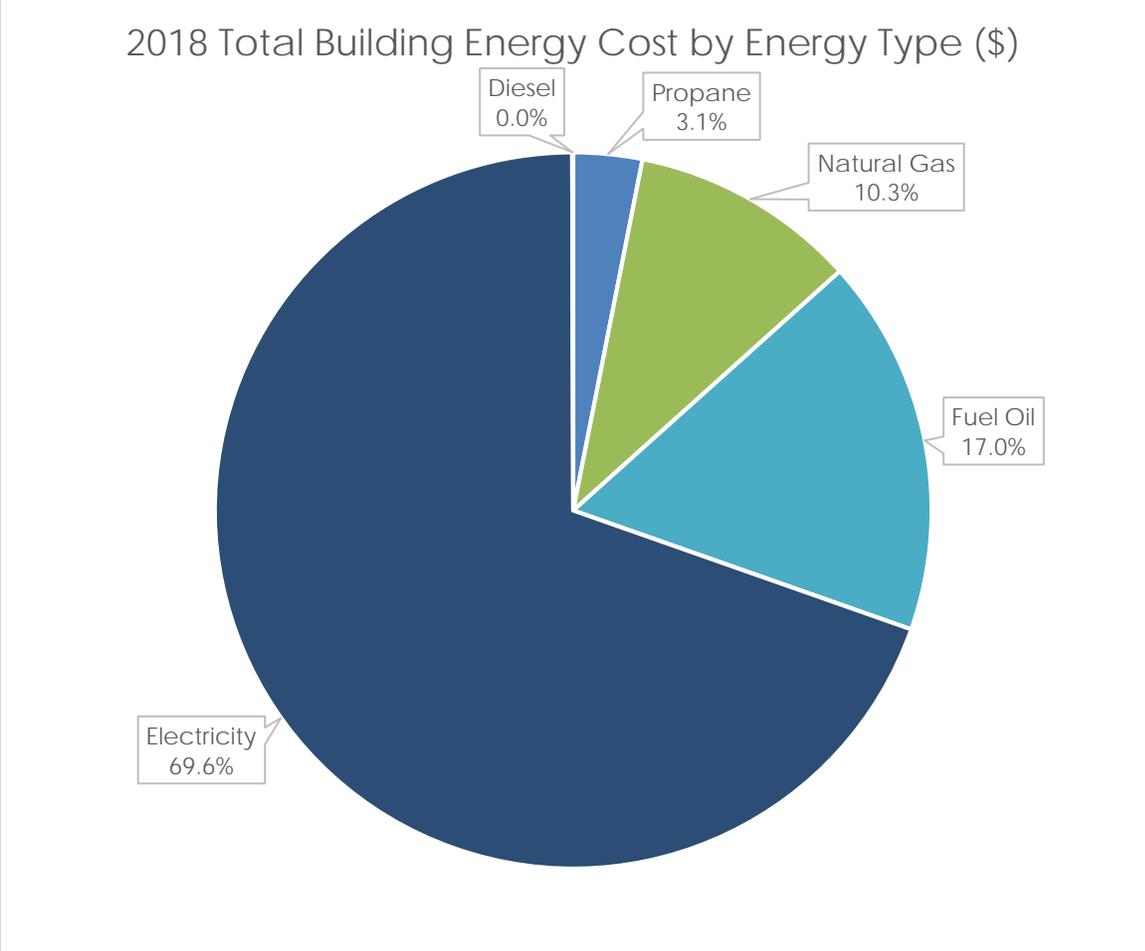

Table 4 shows the quantities and total cost of each energy type purchased in 2018.

Table 4: 2018 Energy Purchased and Cost by Type

Energy Type	Purchased Energy (kBtu)	Cost	Cost per mmBtu <sup>3</sup>
Diesel	50,025	\$ 877	\$ 17.54
Electricity	40,992,439	\$ 1,290,774	\$ 31.49
Fuel Oil	20,178,954	\$ 316,068	\$ 15.66
Natural Gas	21,506,878	\$ 190,232	\$ 8.85
Propane	3,797,098	\$ 57,557	\$ 15.16
<b>Totals</b>	<b>85,525,394</b>	<b>\$ 1,855,508</b>	

Table 5 shows the energy usage and cost at each of the Ulster County properties reported. An energy cost of \$0 indicates that Ulster County owns the property but does not pay the utility bills.

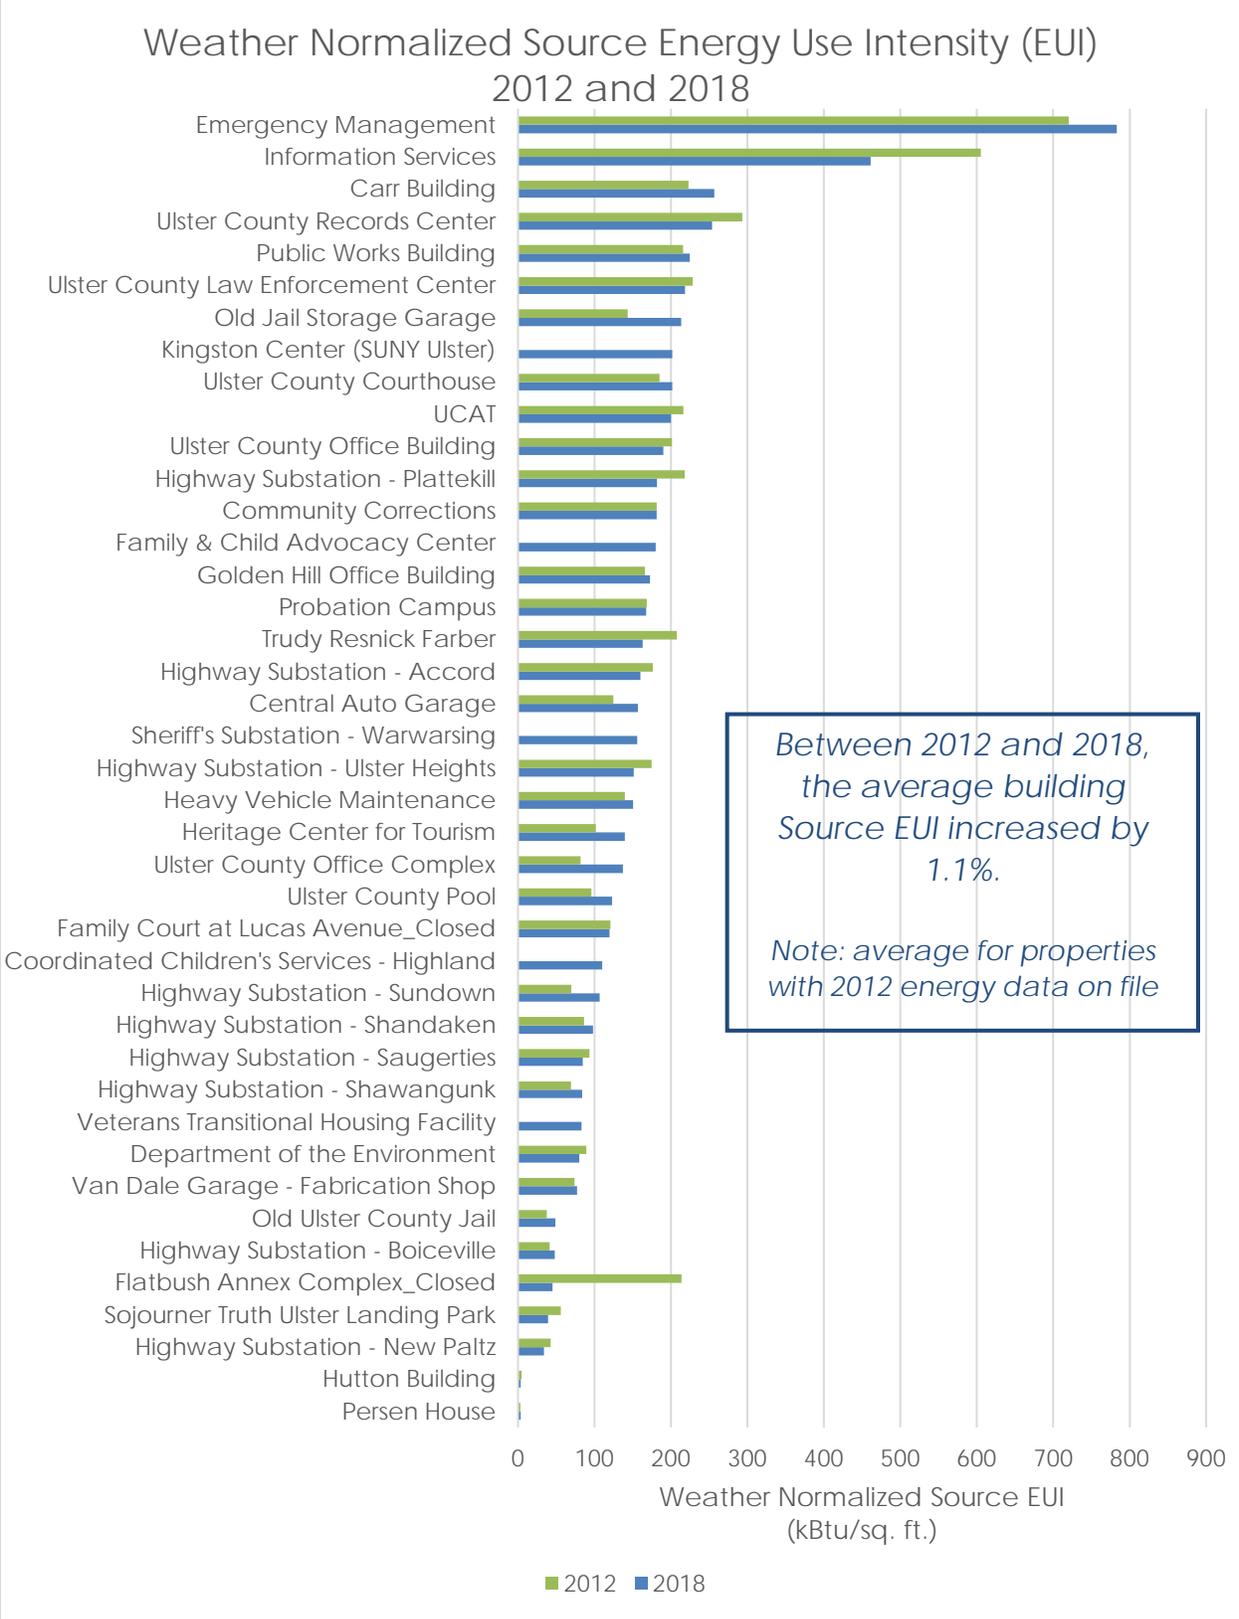

<sup>3</sup> mmBtu = one million British Thermal Units (Btu), or 1,000 kBtu

Table 5: 2018 Energy Consumption and Cost at Ulster County Buildings

Property	Gross Floor Area (sq. ft.)	2018 Site Energy Use (kBtu)	2018 Energy Cost (\$)	Energy Cost Intensity (\$/year/sq. ft.)
Carr Building	3,560	586,538	\$11,411	\$3.21
Central Auto Garage	5,000	560,260	\$12,533	\$2.51
Community Corrections	7,700	709,176	\$18,867	\$2.45
Coordinated Children's Services - Highland	1,100	77,204	\$2,249	\$2.04
Department of the Environment	4,229	235,573	\$4,331	\$1.02
Emergency Management	2,130	674,938	\$19,454	\$9.13
Family & Child Advocacy Center	2,400	228,658	\$6,638	\$2.77
Family Court at Lucas Avenue_Closed	25,282	1,902,873	\$45,842	\$1.81
Flatbush Annex Complex_Closed	24,836	711,581	\$9,372	\$0.38
Golden Hill Office Building	39,600	2,992,855	\$75,787	\$1.91
Heavy Vehicle Maintenance	35,000	4,138,150	\$56,163	\$1.60
Heritage Center for Tourism	2,087	199,525	\$0	\$0.00
Highway Substation - Accord	2,324	132,487	\$5,949	\$2.56
Highway Substation - Boiceville	13,690	473,181	\$10,390	\$0.76
Highway Substation - New Paltz	13,697	199,331	\$6,670	\$0.49
Highway Substation - Plattekill	2,265	271,016	\$7,220	\$3.19
Highway Substation - Saugerties	5,223	324,224	\$7,636	\$1.46
Highway Substation - Shandaken	5,364	362,220	\$7,295	\$1.36
Highway Substation - Shawangunk	4,433	267,667	\$6,666	\$1.50
Highway Substation - Sundown	4,984	418,477	\$8,130	\$1.63
Highway Substation - Ulster Heights	3,545	402,517	\$7,475	\$2.11
Hutton Building	3,386	4,483	\$781	\$0.23
Information Services	12,525	2,420,467	\$62,092	\$4.96
Kingston Center (SUNY Ulster)	29,900	3,548,922	\$0	\$0.00
Old Jail Storage Garage	5,000	360,704	\$14,028	\$2.81
Old Ulster County Jail	53,391	926,904	\$29,177	\$0.55
Persen House	6,405	8,414	\$675	\$0.11
Probation Campus	17,594	1,664,353	\$34,672	\$1.97
Public Works Building	8,925	991,653	\$26,024	\$2.92
Sheriff's Substation - Warwarsing	1,534	155,360	\$3,668	\$2.39
Sojourner Truth Ulster Landing Park	3,198	93,000	\$2,841	\$0.89
Trudy Resnick Farber	20,732	2,183,644	\$47,851	\$2.31
UCAT	23,413	2,389,227	\$50,700	\$2.17
Ulster County Courthouse	43,650	4,466,194	\$101,536	\$2.33
Ulster County Law Enforcement Center	277,000	32,588,122	\$734,616	\$2.65
Ulster County Office Building	62,396	6,104,486	\$129,932	\$2.08
Ulster County Office Complex	117,977	8,362,878	\$180,256	\$1.53
Ulster County Pool	7,126	486,702	\$15,202	\$2.13
Ulster County Records Center	22,550	2,728,222	\$65,694	\$2.91
Van Dale Garage - Fabrication Shop	15,146	826,044	\$19,288	\$1.27
Veterans Transitional Housing Facility	6,656	402,895	\$6,397	\$0.96
<b>Total</b>	<b>946,953</b>	<b>86,581,126<sup>4</sup></b>	<b>\$1,855,508</b>	<b>\$1.98 avg.</b>

<sup>4</sup> This value differs from the Purchased Energy total in Table 4 due to renewable power generated and consumed at Highway Sub-Station - New Paltz.

Chart 3: Weather Normalized Source EUI for Ulster County Properties, 2012 and 2018

### 3. Renewable Electricity Use

Ulster County currently operates the following local renewable generation sites:

*Table 6: Renewable Generation at Ulster County Properties*

Site / Type	System Capacity	Interconnection Type	2018 Energy Generation
New Paltz Substation Salt Shed / Solar PV	30.6 KW DC	Behind the meter	19,033 kWh
Ulster Landfill / Solar PV	1.9 MW DC	Remote net metering	996,800 kWh

Electricity generation from the New Paltz Substation directly reduces the electrical load and usage at the facility – resulting in lower cost and reduced emissions at the site.

Electricity generation from the Ulster Landfill site is credited monetarily to Ulster County’s Central Hudson electricity bills and does not impact the energy intensity or emissions intensity of any one property.

Ulster County purchases community distributed generation capacity from the following sites as locally-generated power:

*Table 7: Community Distributed Generation Sites*

Vendor / Type	Location	2018 Energy Generation
Natural Power Group / Hydroelectric	Wallkill, NY	35,281 kWh (estimated)

In 2018, local renewable energy purchases equaled approximately 9% of Ulster County’s total electricity usage.

Each year, after deducting locally-generated power, Ulster County purchases and retires Green-e certified Renewable Energy Credits (RECs) to certify that 100% of its electricity usage is renewable.

### 4. Greenhouse Gas Emissions

Greenhouse gas emission estimates were calculated using the following conversion factors. These factors were applied to the site energy consumption values to calculate annual emissions.

*Table 8: GHG Emissions Conversion Factors<sup>5</sup>*

Fuel Type	Conversion Factor (kg CO2e/mmBtu)
Diesel Fuel	74.21
Electricity (eGRID Region: NYUP)	39.34
Natural Gas	53.11
Heating Oil (No. 2)	74.21
Propane	64.25

<sup>5</sup> Retrieved from: <https://portfoliomanager.energystar.gov/pdf/reference/Emissions.pdf>

Ulster County offsets 100% of its Scope 1 and 2 emissions through the purchase of Climate Action Reserve carbon credits and Green-e certified renewable energy credits (RECs). To measure progress toward GHG reduction goals and to quantify annual offset credit purchase requirements, this report assumes the absence of emissions offsets. However, it does include reductions achieved through locally-generated renewable power purchases for which Ulster County owns the environmental attributes.

In 2018, the operation of Ulster County buildings generated 4,361.5 metric tons of CO<sub>2</sub>e.

This number differs from the emissions total from the Buildings & Other Facilities sector in the Ulster County Greenhouse Gas inventory due to: 1) the exclusion of "Other Facilities" from this report which do not have a gross floor area greater than 1,000 square feet 2) differences in emissions factors between the EPA national standard and Ulster County's methodology.

Chart 4 shows the emissions contribution of each energy type used by Ulster County in its buildings.

Chart 4: 2018 GHG Emissions by Energy Source

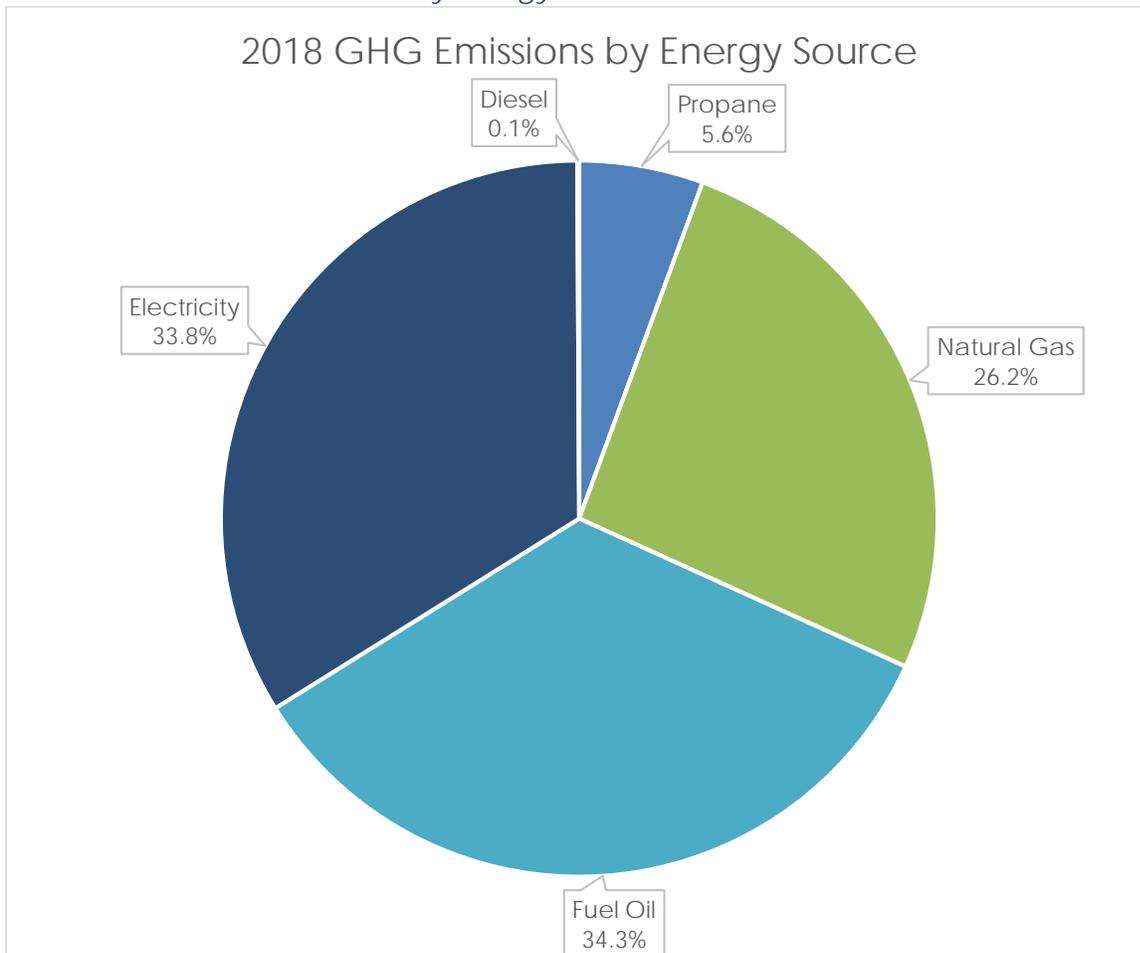

Chart 5 below shows the mass of GHG emissions produced by each building in 2018.

Chart 5: 2018 GHG Emissions by Building

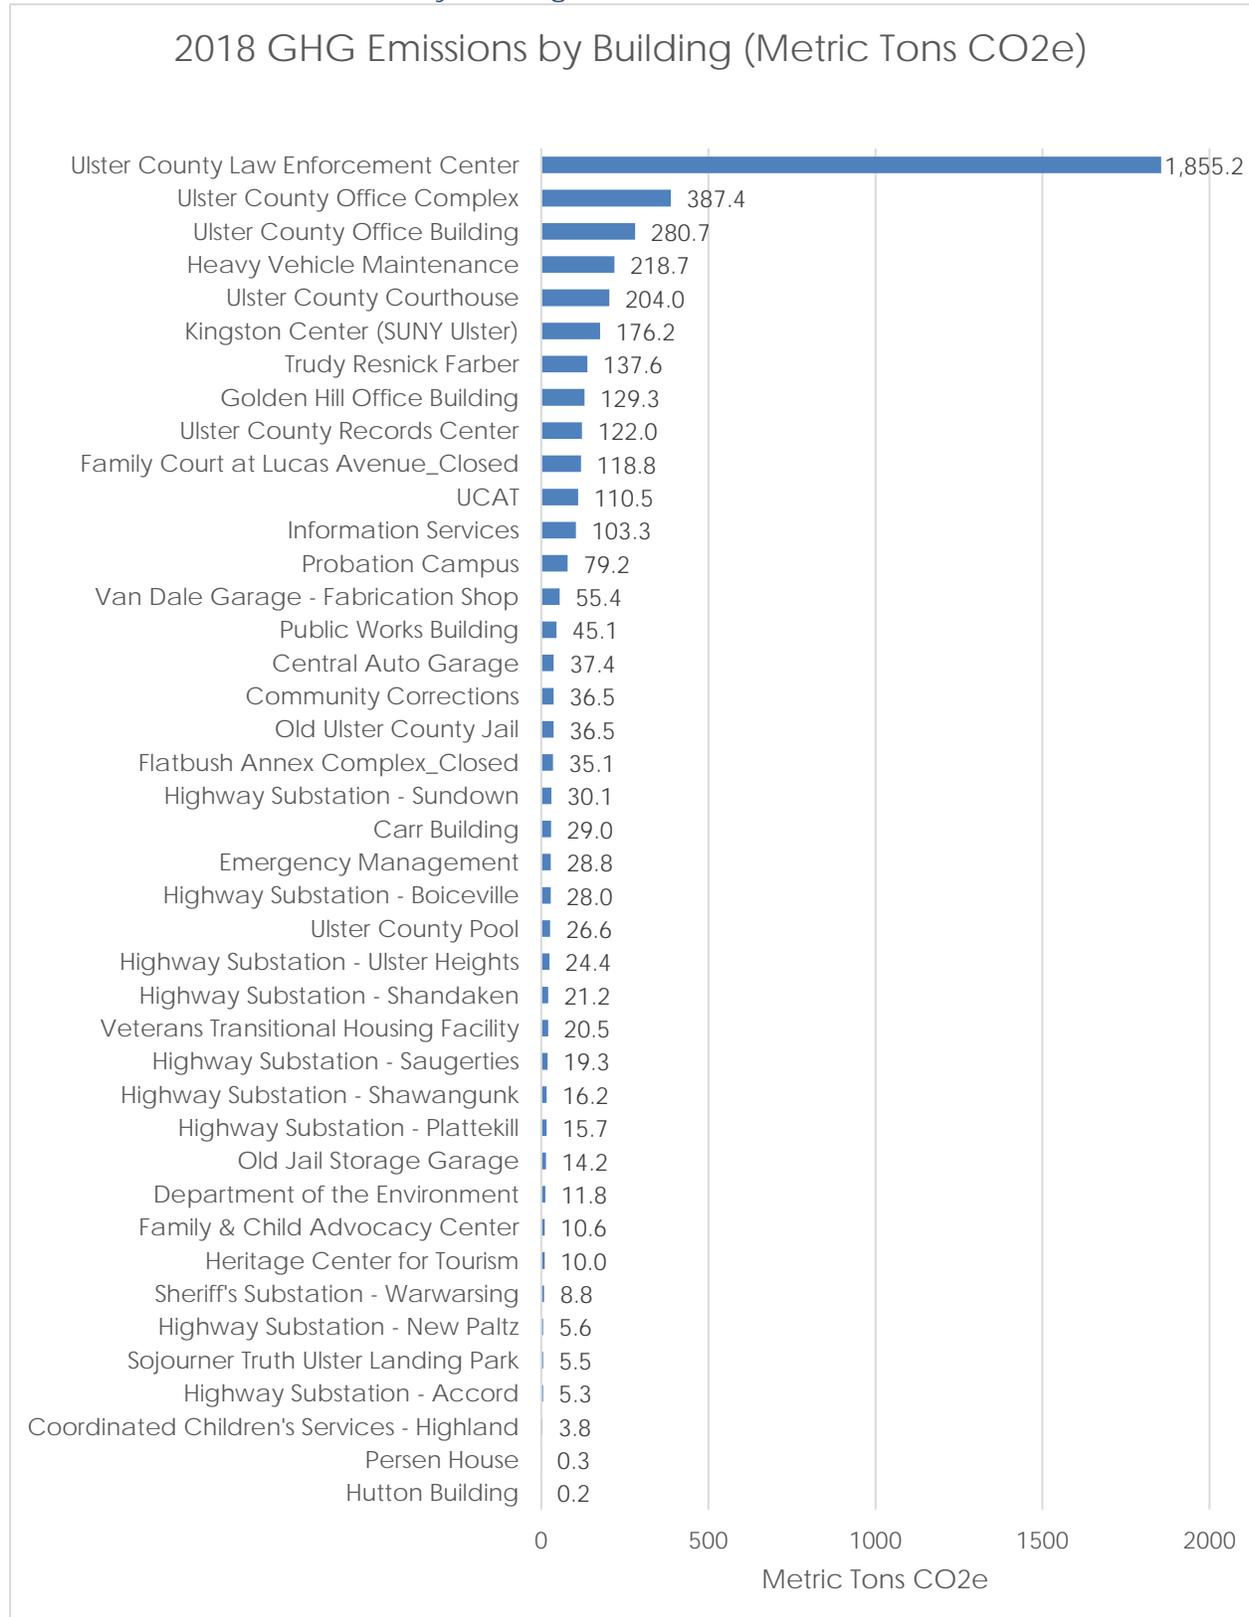

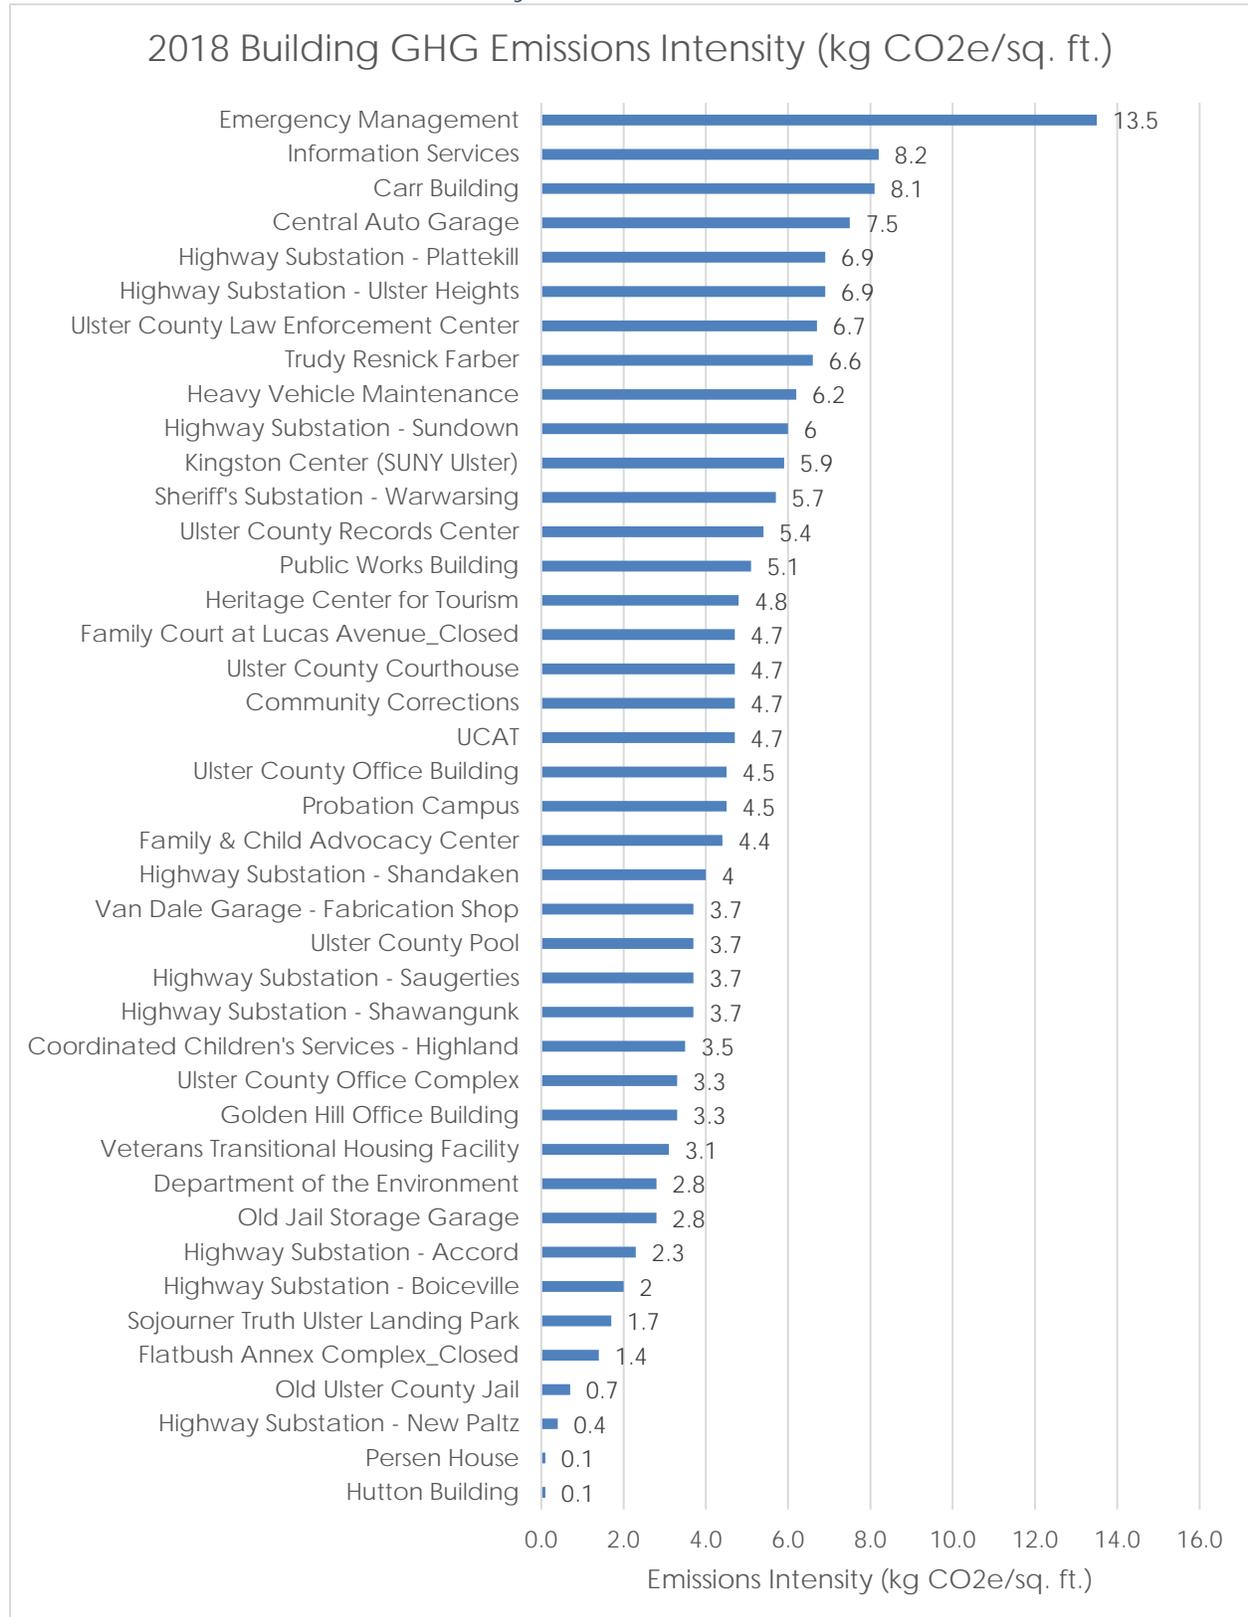

Chart 6 below shows the emissions intensity for Ulster County buildings in 2018.

Chart 6: 2018 GHG Emissions Intensity

# Appendices

## Appendix A: Energy Performance Metrics

**Energy Use Intensity:** Energy Use Intensity (EUI) is the primary energy performance metric used by the EPA's ENERGY STAR program. EUI is the energy use per square foot at a property (kBtu/square foot) and is used to compare buildings of different sizes.

**GHG Emissions Intensity:** Emissions Intensity is the mass of greenhouse gases (CO<sub>2</sub> equivalent) emitted per square foot per year for a given property (kg CO<sub>2</sub>e/sq. ft.).

Greenhouse gas emissions intensity is a useful metric for building energy benchmarking as building performance changes with relation to this metric are directly related to achievement of our policy goal for greenhouse gas reduction. This metric captures the true climate cost of various technologies and energy sources by converting the impact to a common ratio. The emissions intensity ratio accounts for the carbon intensity of the local electricity generation mix when compared with other energy sources used in buildings (i.e. fossil fuels for direct combustion).

**Site and Source Energy:** The EPA ENERGY STAR® program distinguishes between **site** and **source energy**. **Site energy** is the usage as measured exclusively from the building, which is the quantity recorded in utility bills. **Source energy** accounts for the additional energy expenditures associated with production, transmission, and delivery of the fuel. The source energy metric allows the energy efficiencies of buildings to be compared without imparting a bias based on the type of fuel they consume. National average ratios are used within the EPA ENERGY STAR scoring system to prevent any individual building from being penalized or credited due to the relative efficiency of its energy provider.

*National Average Source-Site Ratios used in Portfolio Manager:<sup>6</sup>*

Fuel Type	Source-Site Ratio
Electricity (Grid Purchase)	2.80
Electricity (On-site Solar)	1.00
Natural Gas	1.05
Heating Oil (No. 2)	1.01
Propane	1.01
Diesel	1.01

**Weather Normalized Energy:<sup>7</sup>** Weather normalized energy is the energy a property would have used under average conditions (also referred to as climate normals). In a given year, the weather may be warmer or colder than the building's normal climate; weather normalized energy accounts for this difference. This allows for a better

---

<sup>6</sup> Retrieved from: <https://portfoliomanager.energystar.gov/pdf/reference/Source%20Energy.pdf>

<sup>7</sup> More detail available here:

<https://portfoliomanager.energystar.gov/pdf/reference/Climate%20and%20Weather.pdf>

comparison of building performance over time by removing the effect of annual weather variations.

**National Median Source EUI:**<sup>8</sup> The National Median is a median reference point based on the 2012 Commercial Building Energy Consumption Survey (CBECS) published by the U.S. Energy Information Administration, without any normalization for either weather or operation. The national median is a recommended benchmark for comparison of relative energy performance: 50% of properties perform below the median, and 50% perform above the median. The exact way the median is determined depends on the property use and size.

**EPA 1-100 ENERGY STAR score:** Some buildings can also receive a 1 – 100 ENERGY STAR score. This percentile score, calculated by Portfolio Manager, compares a building's energy performance to similar buildings nationwide. A score of 50 represents median energy performance, while a score of 75 means the building performs better than 75 percent of all similar buildings nationwide — and may be eligible for ENERGY STAR certification.

<sup>10</sup> Values for Source Energy Use differ from values contained in previous reports due to an update of Source-Site ratios by the EPA in 2018.

<sup>11</sup> The baseline has not been adjusted in this report to include properties that have been sold or otherwise divested prior to the start of benchmarking reporting in 2016. However, this baseline has been adjusted in the Ulster County Greenhouse Gas Inventory.
